

CHAPTER 19 - DIGITAL CLOCK

Kit: Congratulations!! We won a trip to an exciting adventure, and this map will take us there. There's a horse tied there that we need to free.

Laya: We need to finish this quickly because the deadline for task completion is 24 hours. And we don't have a watch.

Laya: HOLD ONNNNNNNNN.. we have Rob, the Robot. He can perform calculations and send notifications every minute. And he won't get tired because he's a robot.

Kit: Robb may notify, but he cannot tell us the time, so how will we keep track of it?

Laya: That's a good question. Let's build a digital clock that we can alter every minute after each notification.

Robb: KIT & Laya, I never knew that you could think like Robots too. What a wonderful solution you thought.

Create a Digital clock with blix pieces as shown below. And keep changing the time.
